0.24 歐拉定理

假若 a 與 n 互質，那麼 $a^{\phi(x)}-1$ 可被 n 整除。亦即，$a^{\phi(n)} \equiv 1 (\mod n)$。$\phi(n) = \phi(p^k) = p^k - p^{k-1} = (p-1)p^{k-1}$。若 m, n 互質，則 $\phi(mn) = \phi(m)\phi(n)$。

0.25 路卡斯公式

$$\binom{m}{n} \equiv \prod_{i=0}^{k} \binom{m_i}{n_i} (\mod p)$$

where $m = m_k p^k + m_{k-1} p^{k-1} + \cdots + m_1 p + m_0$ and $n = n_k p^k + n_{k-1} p^{k-1} + \cdots + n_1 p + n_0$.

0.26 模數合成

見 codeBook: modCombine

0.27 強國人說的歐拉定理

如果 a 和 n 互質，那麼 $a^{\phi(n)} \equiv 1 (\mod n)$，對於任意 a, n 和較大的 b，有 $a^b \equiv a^{\phi(n)+b \bmod \phi(n)} (\mod n)$

0.28 無權邊的生成樹個數 Kirchhoff's Theorem

1. 定義 $n \times m$ 矩陣 $E = (a_{i,j})$，n 為點數，m 為邊數，若 i 點在 j 編上，i 為小點 $a_{i,j} = 1$，i 為大點 $a_{i,j} = -1$，否則 $a_{i,j} = 0$。
(證明省略)
4. 令 $E(E^T) = Q$，他是一種有負號的 kirchhoff 的矩陣，取 Q 的子矩陣即為 $F(F^T)$
結論: 做 Q 取子矩陣算 det 即為所求。(除去第一行第一列 by mz)
